

MAKE UP.

United States and Panama
Settle Their Dispute.

—●—

EXECUTIVE ORDER ISSUED.

—

AND SIGNED BY SECRETARY
TAMM FOR PRESIDENT
ROOSEVELT.

—

PANAMA TO REDUCE TARIFF.

—

Free Trade to Apply Between the
Canal Zone and the Republic of
Panama.

—

GOLD STANDARD PROVIDED.

Panama, Dec. 4.—The differences between the United States and Panama, which made necessary the visit of Secretary of War Taft to the isthmus, were settled to-day by the issuance of an executive order signed by Secretary Taft for President Roosevelt, and assented to in a letter by President

The order provides that no trade for the canal zone or the republic of Panama can enter the ports established by the United States at either end of the canal, supplies for the construction of the canal and articles in transit being excepted. This turns the customs receipts of these ports over to the Gov-

Panama agrees to reduce her tariff from 15 per cent. ad valorem to 10 per cent. This reduction applies to all goods except wines, liquors, alcohol and opium. Panama also agrees to reduce her consular fees and port charges to 60 per cent. of the rates at present.

charged. Absolute free trade is to apply between the canal zone and the republic of Panama. Vessels entering the canal ports are granted free entry to the ports of Colon and Panama, and vessels entering the latter ports are extended the same privileges in the canal ports.

Complete jurisdiction is granted the United States in the harbors of Colon and Panama as to sanitation and quarantine regulations.

Panama reduces her rate of postage to two cents, and is to furnish all stamps in the republic and in the canal zone.

Gold Standard Assured.

to the currency agreement of June 20, 1904. It also makes a stipulation regarding citizenship rights to Panamanians in the canal zone and provision is also made in the order for maintenance by the United States of important

the canal zone, and also for the building of a hospital. The order is made effective December 12, 1904, and the full text of it is as follows:

* * *

Full Text of Order.

Section 1. No importations of goods, wares and merchandise shall be entered at Ancon or Cristobal, the terminus ports of the canal, except such goods, wares

Article 13 of the Treaty between the Republic of Panama and the United States, the ratifications of which were exchanged on the 25th day of February, 1904, and except goods, wares and merchandise in transit across the isthmian zone for a destination without the limits of said isthmian zone, and except

oil for fuel purposes to be sold at Ancon or Cristobal to sea-going vessels, said coal and oil to be admitted to these ports free of duties for said purposes. It is provided, however, that this order shall be inoperative, first, unless the Republic of Panama shall reduce the ad valorem duty

ional Convention of Panama, passed July 5, 1904, and which took effect October 12, 1904, from 15 per cent. to 10 per cent. and shall not increase the duty on the articles described in the other schedules of said tariff, except on all forms of wines, liquors, alcohol and opium, on which the

unless Article 38 of the Constitution of the Republic of Panama as modified by Article 146 thereof shall remain in full force and unchanged so far as the importation and sale of all kinds of merchandise are concerned: third, unless the

consular fees and charges of the Republic of Panama in respect of the entry of all vessels and importations into said ports of Panama and Colon shall be reduced to 60 per cent. of the rates now in force, and, fourth, unless goods imported

consigned or destined for any part of the canal zone, shall not be subjected in the Republic of Panama to any other direct or indirect impost or tax whatever.

Special Provisions.

Section 2. In view of the proximity of the port of Ancon to the port of Panama, and of the port of Cristobal to the

port of Colon, the proper authorities of that zone shall, when not inconsistent with the interests of the United States, at the instance of the proper authorities of the Republic of Panama, permit any vessel entered at or cleared from the port of Panama and engaged in trade with its cargo and passengers, under suitable regulations for the transit of the imported merchandise and passengers to and from the territory of the Republic of Panama to use and pay the dockage and other charges at the ports of Colon and Cristobal, respectively, upon payment of proper dockage dues to the

of vessels or of special privileges as to dockage and other facilities at Panama and Colon, together with suitable arrangements for manifest of merchandise and passengers to and from the territory of each of them, shall be granted by the authorities of the Republic of Panama, when not inconsistent with its interests, to any vessel together with its cargo and passengers entered at or cleared from the ports of Ancon and Colon; and the laws, decrees, and regulations herein contained shall affect the complete administrative, police and judicial jurisdiction of the two Governments over their respective ports and harbors, except as hereinafter provided, in

This image shows a blank, aged, cream-colored page, likely an endpaper or flyleaf of a book. The paper has a slightly textured appearance with some minor discoloration and a small dark spot near the top center. A dark horizontal strip is visible along the bottom edge, possibly indicating the binding or the edge of the book.

TOPICS

Touched Upon By Secretary of Agriculture.

TUBERCULOSIS IN CATTLE.

PROGRESS OF SOIL SURVEY AND TOBACCO INVESTIGATIONS.

STATE AID IN ROAD BUILDING.

The following extracts are from the annual report of the Secretary of Agriculture, submitted to the President November 29. They are an addition to the report printed in the Courier-Journal of last Wednesday, and deal with a variety of interesting agricultural topics.

Long-Range Forecasts.

It is hoped that the time will come when it will be possible to give the weather for coming months, to specify in what respect the coming month or season will conform to the normal for the month or season that is common to the month or season.

Bureau of Animal Industry.

Our animal industry is shown only in small part by the figures showing the exports, yet these exports are so large as to be worthy of mention. The animal products in the fiscal year 1904 were valued at about \$48,000,000, which was an increase over the previous year of \$1,000,000. The exports of meat and meat products, including lard, tallow, and hides, amounted to more than \$47,000,000, a decrease of \$4,000,000 from the year before.

Inspection of Meat.

The inspection of animals and animal products was maintained at fifty-one establishments and offices. The total number of animals inspected was about 6,500,000, whereas in 1903 the number was about 6,000,000. This shows an increase of 500,000 animals. The total value of the products inspected was \$48,000,000, an increase of \$1,000,000 over the year before.

Tuberculosis.

The work on the subject of tuberculosis has been conducted throughout the year along lines which have been planned for several years. Some experiments, which have been recently reported upon by the bureau so show conclusively, it is believed, that it is an error to conclude that cattle cannot be infected with human tuberculosis. The experiments show that only justly but show the desirability of a rigid enforcement of public regulations looking to the control of the circulation of tuberculosis in cattle. The demand for tuberculin greatly increased during the year. The amount of tuberculin used was 1,400 doses, while in 1903 the number of doses was 5,000.

Inspection of Dairy Products.

The reports for 1904 show that there were seventy-three inspectors licensed and bonded, which was a reduction of nine from the previous year. The inspectors were located in fourteen States and the District of Columbia. The quantity of tuberculin used in 1904 was about 1,400 doses, while in 1903 the quantity was 5,000. The quality of renovated butter is improving.

Bureau of Plant Industry.

In no field of industrial work have there been greater advances during the past year than in the field of plant industry. The reports of the bureau show that the work has been conducted along lines which have been planned for several years. Some experiments, which have been recently reported upon by the bureau so show conclusively, it is believed, that it is an error to conclude that cattle cannot be infected with human tuberculosis. The experiments show that only justly but show the desirability of a rigid enforcement of public regulations looking to the control of the circulation of tuberculosis in cattle. The demand for tuberculin greatly increased during the year. The amount of tuberculin used was 1,400 doses, while in 1903 the number of doses was 5,000.

Sugar-Beet Growing.

The development of the sugar-beet industry continues apace. The Bureau of Plant Industry is making an effort to improve the conditions of the crop in the matter of seed, by encouraging the use of fertilizers which are better adapted to the soil, and by studying the diseases with a view to discovering remedies for them, securing improvement in the matter of seed, by the production of beet which will give seed of a single half of grain, etc.

American Tea and Dates.

The department has continued its work in the production of American tea. The more advanced investigations have been conducted, as heretofore, at Sumnerville, S. C. Encouraging results have been secured in the establishment of American dates in the southwestern portion of the United States. The date is a highly satisfactory way.

Special Work on Cotton.

The Bureau of Plant Industry has made a special effort to improve the cotton plant. The work has been conducted along lines which have been planned for several years. Some experiments, which have been recently reported upon by the bureau so show conclusively, it is believed, that it is an error to conclude that cattle cannot be infected with human tuberculosis. The experiments show that only justly but show the desirability of a rigid enforcement of public regulations looking to the control of the circulation of tuberculosis in cattle. The demand for tuberculin greatly increased during the year. The amount of tuberculin used was 1,400 doses, while in 1903 the number of doses was 5,000.

Diversification Farming.

As another feature of the work in the diversification of agriculture, the bureau has been making a study of the various plants which are adapted to the soil. The work has been conducted along lines which have been planned for several years. Some experiments, which have been recently reported upon by the bureau so show conclusively, it is believed, that it is an error to conclude that cattle cannot be infected with human tuberculosis. The experiments show that only justly but show the desirability of a rigid enforcement of public regulations looking to the control of the circulation of tuberculosis in cattle. The demand for tuberculin greatly increased during the year. The amount of tuberculin used was 1,400 doses, while in 1903 the number of doses was 5,000.

Diseases of Tobacco.

The most serious disease of tobacco in the United States during the past season has been the "black shank" and "black root." This has been very destructive to certain portions of the South, and so rapid has been the spread of the trouble that it threatens the complete destruction of the tobacco industry in North Carolina. Evidence has been obtained that the disease is very similar to other wilt troubles, and that it may be controlled by treatment through the selection and development of resistant types.

Johnson Grass.

The agriculturalists of the bureau have demonstrated that the fornicary grass known as Johnson grass may be completely destroyed by the use of arsenic. That it may really be held in check by the use of arsenic has been demonstrated by the method developed in their investigations and are endeavoring to devise an arsenical formula for moving Johnson grass rootstocks from the soil.

New Plant Creations.

The plant-breeding work has been continued along a number of new lines. The most advanced work has been in the matter of securing new and desirable varieties of cotton. The work has been conducted along lines which have been planned for several years. Some experiments, which have been recently reported upon by the bureau so show conclusively, it is believed, that it is an error to conclude that cattle cannot be infected with human tuberculosis. The experiments show that only justly but show the desirability of a rigid enforcement of public regulations looking to the control of the circulation of tuberculosis in cattle. The demand for tuberculin greatly increased during the year. The amount of tuberculin used was 1,400 doses, while in 1903 the number of doses was 5,000.

Food Standards.

Another important advance which deserves special attention is that relating to the standards of food products.

to standards of purity for food products. The Secretary of Agriculture has been authorized by Congress to fix standards, and in order that they may be just and reasonable, he has been authorized to consult with the experts of the Association of Official Agricultural Chemists and other experts, as he may see fit, to advise him in regard to such matters. The work of the bureau in this respect is in collaboration with the Association of Agricultural Chemists, and has been commended by the Bureau of Chemistry.

Farm Management.

In order to properly conduct the work on farm management, which has been set forth in previous reports, an office has been established for the purpose. The office is located in the Bureau of Plant Industry, and is under the direction of the Chief of the Bureau. The work of the office is to collect and disseminate information in the Bureau in such a manner that it can be placed in the hands of the farmer for his practical use. The office is also engaged in the work of securing farm practices in all sections of the country as a basis for further work.

Progress of the Soil Survey.

The area surveyed and mapped during the past year was 2,000 square miles, or 12,800,000 acres. The area surveyed during the preceding fiscal year was 2,200 square miles, or 13,800,000 acres. The work of the bureau in this respect is in collaboration with the Association of Official Agricultural Chemists and other experts, as he may see fit, to advise him in regard to such matters. The work of the bureau in this respect is in collaboration with the Association of Agricultural Chemists, and has been commended by the Bureau of Chemistry.

Tobacco Investigations.

In the line of tobacco investigations carried on by the Bureau of Soils the most important work during the past fiscal year has been the investigation of the Cuban seed tobacco on certain soils in Texas, Alabama and South Carolina. The work was begun in July, 1903, and continued throughout the year. The results of the work have been published in the Bureau of Soils report for 1904. The work has been conducted along lines which have been planned for several years. Some experiments, which have been recently reported upon by the bureau so show conclusively, it is believed, that it is an error to conclude that cattle cannot be infected with human tuberculosis. The experiments show that only justly but show the desirability of a rigid enforcement of public regulations looking to the control of the circulation of tuberculosis in cattle. The demand for tuberculin greatly increased during the year. The amount of tuberculin used was 1,400 doses, while in 1903 the number of doses was 5,000.

Bureau of Entomology.

Insect pests caused a loss to the staple crops of the United States estimated at some \$50,000,000 annually. The total number of insects inspected was about 6,500,000, whereas in 1903 the number was about 6,000,000. This shows an increase of 500,000 insects. The total value of the products inspected was \$48,000,000, an increase of \$1,000,000 over the year before.

Silk Culture.

The work in silk culture has been conducted in all available lines. Silk reeling has been practically established with imported French reeling. The work has been conducted along lines which have been planned for several years. Some experiments, which have been recently reported upon by the bureau so show conclusively, it is believed, that it is an error to conclude that cattle cannot be infected with human tuberculosis. The experiments show that only justly but show the desirability of a rigid enforcement of public regulations looking to the control of the circulation of tuberculosis in cattle. The demand for tuberculin greatly increased during the year. The amount of tuberculin used was 1,400 doses, while in 1903 the number of doses was 5,000.

Insect Enemies of Grain.

An elaborate investigation of insects affecting grain and other field crops has been begun, and a special field agent of wide experience and ability has been put in charge with assistants. The work has been conducted along lines which have been planned for several years. Some experiments, which have been recently reported upon by the bureau so show conclusively, it is believed, that it is an error to conclude that cattle cannot be infected with human tuberculosis. The experiments show that only justly but show the desirability of a rigid enforcement of public regulations looking to the control of the circulation of tuberculosis in cattle. The demand for tuberculin greatly increased during the year. The amount of tuberculin used was 1,400 doses, while in 1903 the number of doses was 5,000.

Farmers' Institutes.

Work in the interests of the farmer's institutes throughout the country has been continued. The work has been conducted along lines which have been planned for several years. Some experiments, which have been recently reported upon by the bureau so show conclusively, it is believed, that it is an error to conclude that cattle cannot be infected with human tuberculosis. The experiments show that only justly but show the desirability of a rigid enforcement of public regulations looking to the control of the circulation of tuberculosis in cattle. The demand for tuberculin greatly increased during the year. The amount of tuberculin used was 1,400 doses, while in 1903 the number of doses was 5,000.

Bee Culture.

In bee culture comparative tests have been continued with the Caucasian and the Italian bees. The work has been conducted along lines which have been planned for several years. Some experiments, which have been recently reported upon by the bureau so show conclusively, it is believed, that it is an error to conclude that cattle cannot be infected with human tuberculosis. The experiments show that only justly but show the desirability of a rigid enforcement of public regulations looking to the control of the circulation of tuberculosis in cattle. The demand for tuberculin greatly increased during the year. The amount of tuberculin used was 1,400 doses, while in 1903 the number of doses was 5,000.

State Road Legislation.

The most important feature in State road legislation of recent years is the plan which has been adopted in the State of Texas. This plan involves a recognition of the fact that road improvement is a matter of common interest to all sections of the State. The main features of the State aid plan are: (1) A state highway commission, (2) annual appropriations from the State treasury, (3) the construction of a system of building good roads, the balance of the cost to be met by the counties, (4) the construction of a system of building good roads, the balance of the cost to be met by the counties, (5) the construction of a system of building good roads, the balance of the cost to be met by the counties.

Emperor Receives Marquis Montoro. Berlin, Dec. 4.—Emperor William to receive in audience Marquis Montoro, the Cuban Minister to Germany, and Great Britain. The Emperor spoke of the admirable progress the island of Cuba had made since the establishment of its independence.

WANTED—Men we teach the barber trade in few weeks by constant practice and expert

WHEAT

Decline of Early Week All Recovered.

CORN COMING TO MARKET.

TEMPTING PRICES CAUSE THE FARMER TO SELL.

HIS CRIBS ARE STILL FULL.

[Correspondence of the Courier-Journal.] Chicago, Dec. 4.—Weather, foreign and domestic, has again been largely influenced in the wheat market this week. Conditions in the Argentine country, reports of which have been more or less contradictory, have been instrumental in shaping prices, as have those in the winter wheat belt of the United States. As a whole the market has been nervous to the degree of the beginning of the week by the further heavy increase in the visible, which at the first session was shown to have added 2,106,000 bushels to its previous bulk. The price decline of the week, however, was not due to any change in the situation, of less bearish character, turned it in the opposite direction, and when the close of Friday morning the market had all been recovered and fractional net gains made as compared with the closing of the previous Saturday, and when the final session ended still further gains had been recorded.

The heavy rains reported in the Argentine while they did not greatly alarm the operators, caused nervousness, and then when the clearing came it was remembered that the Argentine exports last year during the season's harvest, the result of which was perfectly satisfactory. Again, the Argentine in the previous week showed conclusively that European importers were getting all the wheat they needed without calling on this country for anything but a small modicum of flour, unless to the latter the clearances of Manitoba wheat might be added.

Taking exception to the latter into consideration, Bradstreet's statement of the week's exports from this side showed them to amount to 2,000,000 bushels, compared with 1,320,000 bushels the previous week. Russia and the Danubian countries, however, gave indications of a falling off for the time to come.

That there was practically no wheat delivered Thursday or Friday on December contracts was the beginning of the greater confidence in prices reflected by the advance that has been mentioned, but that of itself would probably not have had little effect on the market, had it not been for the fact that spring wheat markets began to impress some of the speculators who had been betting on a decline in the season's crop, their views to press their opinions with greater confidence.

That Armour & Company were the leaders in that respect was only in line with views expressed earlier in the week by Mr. Valentine, President of that company. That he met with resistance was to be expected from the large number in the trade that keep their eyes upon the market, and the weekly advances to the visible, and certainly if speculation looked no further ahead than that respect was enlarged from the statistics of the bulletin boards there is small encouragement for the bulls. However, should the visible statement Monday less bearish, with probably something less than 1,500,000 bushels added to the crop, the season's increase for the corresponding time last year.

The crucial point in the present situation is the domestic receipts, and there are several good judges of the probabilities who think they are not far from the mark. The assistance they are likely to receive from that source for the remainder of the season.

Improved Corn Receipts.

The weather of the week still favored the drying of corn, and the result was seen in the rapid improvement in the grading of the local receipts. Receipts which, under the existing conditions, might have been expected to show an increase in proportion to the better grading were not sustained, and the comparative steadiness in prices. The latter had as well to thank a brisker movement of the market in answer to an increasing demand from abroad.

It is now well assured that in the neighborhood of present values there will be large quantities taken by the importing countries. The shipping companies, Argentina coming simultaneously with the fitting of American corn for export, having directed the abundance of the crop is apt, if added to for any length of time, to create a doubt of the correctness of the largest of the estimates. That greater suspicion of the heaviest estimates has not been aroused before the weather of the week has been favored with, which has fitted for market millions of bushels that never would have been fit for shipment, removed from consideration of the growers in deciding whether the present is the proper time to export, or to hold.

Had the weather been other than it was, a vast number who now have corn fit to market would have been prevented from the attempt, or, at least, that are obvious, but with no such obstacle in their way, and such tempting offers before them, the proceeds of the strange that farmers are such comparatively reluctant sellers. They are rich, it is said, and are not compelled to sell before the spirit moves them, but we do not hear of rich people omitting to cut the coupons from their bonds, when due for payment, and a farmer with a crop of merchantable grain in his barn who after harvest is not unlikely to have similar desires to the bondholder, who prefers to let the proceeds of his harvest added to his bank account.

There is reason to believe that the idea of farmers holding their grain for the cause of their overabundance is more prevalent than true, and it is much more probable that the refusal to sell early is because they are no reason to apprehend lower prices later, and holding on is their way of speculating on the market.

WHEAT

Live Stock Market Dull.

Decline of Early Week All Recovered.

At the stockyards the trade for cattle has been rather uncertain in tone, and there has been the usual spread of values. The live-stock market, however, there have been few days when the urgency of demand in the open market has been so much to make buying markedly active. Now that the show has closed it is expected live will return to the market in a satisfactory condition.

Hogs are five cents under the top for last week, but there was a gain in the later trading of the week, and the general average of values is a strong one. The market has held up so well in a week when the live-stock market was so heavy as to break all previous records for the year is thought to presage a good market for the year henceforth.

In sheep prices, which have changed from last week. The market as a whole is in a satisfactory condition.

SEABOARD AIR LINE ENTERS BIRMINGHAM.

First Train Over the Extension From Atlanta Will Be Operated Today.

Birmingham, Ala., Dec. 4.—[Special.]—The Commercial Club and Board of Trade of Birmingham have appointed special committees to welcome the arrival here to-morrow of the first train on the new extension of the Seaboard Air Line from Atlanta to Birmingham.

The Seaboard Air Line announces that it will begin to operate its ship freight to-morrow, having practically completed all its terminal facilities, and being prepared to inaugurate a regular freight service to-morrow. Through freights will be run direct from Birmingham to Portland, Seattle, and other points on the coast, and will be in operation by the time the first train from Atlanta to Birmingham will be made. It is understood that very close relations will exist between the Seaboard and the St. Louis and San Francisco lines here. The Frisco-Rock Island owners have extended their lines to the Gulf of Mexico, and it is believed that a through passenger service from the West to Atlantic tide-water will be operated before long over these lines.

INTO WEAKER HANDS STOCKS ARE STEADILY PASSING WITH THE BOOM.

THE END NOT YET IN SIGHT.

Not a Cloud on Horizon To Check the Crazy For Speculation.

New York, Dec. 3.—Favorable conditions continue to exert a stimulating influence on the stock market, and the high prices and the fact that stocks are steadily passing from strong into weaker hands, the market shows a strong tendency to continue its upward movement. The attitude of the large bankers toward the market is easily explained, and they encourage speculation, and until some radical change occurs it is impossible to tell when the market will turn.

WEATHER

Has Hampered Work In the Oil Fields.

FEW NEW WELLS BROUGHT IN.

TALK OF PIPE LINE TO THE WHITLEY FIELD.

THE QUOTATIONS ARE LOWER.

Lexington, Ky., Dec. 4.—[Special.]—Last week's record in the Kentucky and Tennessee oil field showed fewer completions than usual. This is due to the fact that the weather has hampered work in the oil fields. The latter part of the week came too late to materially affect operations, which have been partly tied up by a lack of water.

The Cumberland county field shows three producers of more than the average output. The earlier part of the week the weather was so bad that the work in the field was hampered. The weather was so bad that the work in the field was hampered.

FINANCE AND COMMERCIAL

MONETARY.

Money market. A gentleman well posted on money matters in New York stated today that in his opinion there would be no period of tightness at any time in the immediate future, and that being the case he could not see what would happen to create a shortage of money. The supply of money is abundant, and the demand is not excessive. The market is in a satisfactory condition.
